

# Phone Book App

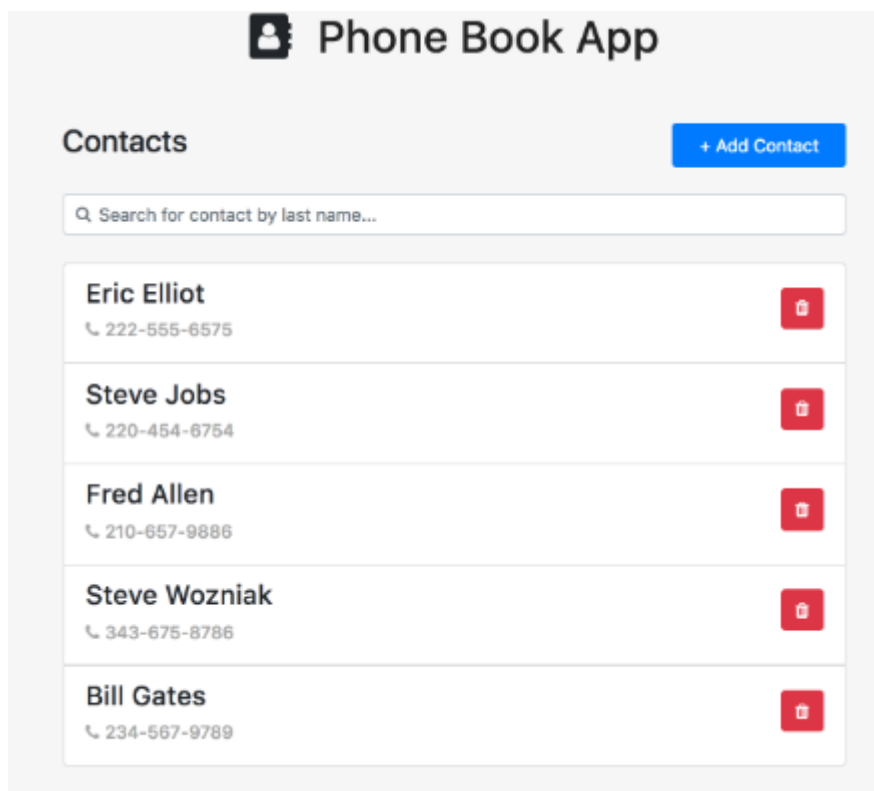

This app will help user to maintain records of contacts as contact's name and phone number. It should provide the facility to:

- **Add new contacts and update and remove existing contacts.**
- **Sort the phone book in ascending/descending order by name/number.**

Each record should be stored as an object of class **Contact** and the same should be added and manipulated using Collections. Storing records in database is not required in this app.

Below are the sample output screens for your reference:

## 1) Home Page

## 2) New Contact Page:

The screenshot shows a 'New contact' modal form overlaid on a blurred background of the app's main interface. The modal has a title bar with 'New contact' and a close button (X). It contains three input fields: the first is labeled 'Bill' and contains the text 'Bill'; the second is labeled 'Gates' and contains the text 'Gates'; the third is a phone number field containing '234-567-9789'. At the bottom right of the modal are two buttons: 'Create' (blue) and 'Cancel' (grey). The background shows a list of existing contacts: Eric Elliot (222-555-6575), Steve Jobs (220-454-6754), Fred Allen (210-657-9886), and Steve Wozniak (343-675-8786), each with a red delete icon.

## 3) Searching Contacts:

The screenshot shows the 'Phone Book App' interface. At the top is a header with a person icon and the text 'Phone Book App'. Below this is a 'Contacts' section with a '+ Add Contact' button. A search bar contains the text 'Elliot'. Below the search bar, a single contact is displayed: 'Eric Elliot' with the phone number '222-555-6575' and a red delete icon.
